

Report CIBINQO® abrocitinib

Product & Mechanism of action	Authorized indications Licensing status	Essential therapeutic features								NHS impact																																																																																												
Substance: abrocitinib Brand Name: Cibinqo Originator/licensee: Pfizer Europe MA EEIG Classification: NCE ATC code: D11AH Orphan Status: Eu: No Us: - Mechanism of action: Abrocitinib is an oral JAK1 selective inhibitor that inhibits several key-cytokine signaling pathways known to have an important role in the pathophysiologic characteristics of AD, including IL-4, IL-13, IL-31, and interferon γ [1].	Authorized Indication: EMA: abrocitinib is indicated for the treatment of moderate-to-severe AD in adults who are candidates for systemic therapy [2]. Route of administration: OS Licensing status EU CHMP P.O. date: 14/10/2021 FDA M.A. date: - EU Speed Approval Pathway: No FDA Speed Approval Pathway: - ----- ABBREVIATIONS: AD: Atopic Dermatitis BL: Baseline CHMP: Committee for Medicinal Products for Human Use EASI: Eczema Area and Severity Index EASI-75: 75% improvement in EASI score from BL ICER: Institute for Clinical and Economic Review IGA: Investigator's Global Assessment IL: Interleukin JAK1: Janus Kinase 1 M.A.: Marketing Authorization P.O.: Positive Opinion pts: patients QALY: quality-adjusted life-year vs.: versus	Summary of clinical EFFICACY: <table><tr><th>Trial</th><th>Treatment Arms</th><th>Primary Endpoint</th><th>Results</th></tr><tr><td>JADE Mono-1 (NCT03349060) is a multicentre, double-blind, randomised phase 3 trial in pts aged ≥12 years, with moderate to severe AD</td><td>●abrocitinib 100 mg (n=156), ●abrocitinib 200 mg (n=154), ●placebo (n=77) All treatments were administrated once daily for 12 weeks</td><td>• Percentage of pts achieving IGA response of clear (0) or almost clear (1) and ≥2 points improvement from BL to week 12 • Percentage of pts EASI response of at least 75% improvement from BL to week 12</td><td>• An IGA response was achieved in 24% of pts in the abrocitinib 100 mg arm vs. 8% of pts in the placebo arm;
